A network monitor written by Microsoft. SuperScan has been featured in: #1 (tutorial) Microsoft Press; #5 (review) The Standard; #6 (review) Inspire; #8 (review) The MacAdmin; #10 (review) Blue Dragon; #18 (review) WinSage Power Review; #20 (review) Trouble Shoots; #25 (review) Review Period; #27 (review) Network Review. rpz is a utility designed to display stats on the IP protocol and port number for an IP address. rpz can display the protocol information for a single IP address or for multiple IP addresses. For example, the command: rpz -i

8.8.8.8 -p TCP displays information about TCP port number for 8.8.8.8. UIP is a Network Utility for Windows. It can display and manage all the components of the TCP/IP Model, including servers, ports, and protocols (e.g. TCP, UDP, ICMP, etc). It is especially useful for checking the status of protocols and for monitoring ports. UIP gathers information about the state of protocol components and hosts. It enables the user to check the network with a single command. For example, the command `UIP -i -d "8.8.8.8" -p tcp -s` displays the state of TCP port 80 on the host with IP address 8.8.8.8. is a web site search engine that crawls the web and allows you to search the web for web

SuperScan Free Download

SuperScan is a multi-functional application designed as a TCP port scanner, pinger and address resolver. It encases a fine selection of utilities that can assist network administrators in monitoring and controlling hosts and domains. SuperScan has gained its crowd of fans over time due to its superior scanning speed and fast hostname resolving capabilities. In addition to its main purpose, the application also features a collection of useful tools that includes ping, traceroute, Whois and HTTP request. Installation is not necessary, since this is a portable application. You can copy

the files on your removable drive and have it at your disposal everywhere you go, without leaving a footprint on the system registry. The interface is simple, yet organized and easy to understand. The program's features are divided into several tabs, as follows. The Scan section allows you to lookup a hostname / IP or a range of IPs, with the results in the lower area of the UI. The Host and Discovery module enables you to configure timeouts and port range for UDP and TCP scan modes, while the Scan Options tab allows you to configure the scan speed. From the Tools section, you have access to a wide array of utilities, including hostname lookup, ping, traceroute, bulk resolve (works

with a list of IPs), HTTP head / GET Requests and WhoIs. The Windows Enumeration tab displays general information for the specified host (NetBIOS Name Table, MAC Address, Shares, Account Policies, Logon Sessions, Services, etc). The speed that SuperScan was capable during our tests was quite decent. It didn't crash even when we requested a scan for a very large IP range and performed all the tasks as instructed. In conclusion, SuperScan is a wise choice for any user interested in monitoring certain hosts and a must-have for network administrators. Read more I would give 5 stars to this application. I was using it as an address/hostname search tool. I would use it as a DNS

resolver with the IPv4 Teredo address resolver feature. I would also use it for checking if a host is infected and should be quarantined. I would pay for this application. Features - 5 stars. Good interface, works, easy to learn. No ads. Speed is acceptable. Whois is a good feature for port scanning. What I really liked is that it will allow a person to be put in quarantine or verified. I would definitely download this
